

Please join us as Alfredo Orejuela and Michael Shurin from PicoTurbine STEM Education ([www.picoturbine.com](http://www.picoturbine.com)) share their thoughts and research titled, "From the Classroom to 'The Real World'" on Tuesday, December 1, at Mount Bethel Village, 130 Mount Bethel Rd. Warren, NJ at 6:30pm.

In the next decade there will be an influx of up to 800,000 STEM-related jobs. Many of these jobs will focus on advanced manufacturing techniques and their counterparts, including 3D printing, computer-aided design, renewable energy, and robotics. The presentation will highlight ideas and products that will help launch students from the classroom to "the real world," such as the importance of preparing students for an evolving job market with a solid STEM education.

The discussion will focus on the ways in which alternative energy, education, and advanced manufacturing intertwine, and what this means for the future of our economy. 3D printers and models will be available demonstrations. If your child is interested in learning about some of these concepts, please bring them along.

RSVP to [info@warrentef.org](mailto:info@warrentef.org) if you and/or your child will be attending.
